NVC FUND BANK

Server-to-Server Integration Guide

API Overview

The NVC Fund Bank API provides comprehensive server-to-server integration capabilities for financial institutions, payment processors, and enterprise clients. Our RESTful API supports real-time transactions, account management, and reporting functions.

Authentication

API authentication uses industry-standard OAuth 2.0 with JWT tokens. All requests must include proper authentication headers and are secured with TLS 1.3 encryption.

Available Endpoints
